SUMMARY OF QUALIFICATIONS

- 2 years of programming experience.
- Software Developer: C#, Python, C++, Java. Git
- Full-stack Web developer: HTML5, CSS, Javascript and Apache web server.
- IT skills: SQL, MySQL, Pentaho.
- Machine Learning/AI: Pandas, Sklearn, Pytorch, Tensorflow
- Keen and strong interest in STEM fields.

EDUCATION

Bachelor of Computer Science

August 2020-December 2024

Minor in Mathematics

University of South Alabama, Mobile, Alabama

- GPA: 3.4/4.0

SKILLS

- Proficient programming experience in Python, C, C#, C++, Java.
- Minor front end & back end web development.
- Creating and maintaining servers and databases.
- Building data warehouses to modify, store and analyze assortment of data
- Collaborating with teams using agile and collaborative tools like Git.

EXPERIENCE & PROJECTS

Freelance Quality Assurance Analyst | Outlier

August 2024 - Jun 2025

- Analyzed AI written code and tweaked them according to client guidelines.
- Worked with over a dozen AI prompts and responses improving their efficiency by adjusting the model written in various programming languages such as c# and python.

Adverse Event Medical Prediction Algorithm | Fivos & University of South Alabama

Spring 2024

- Developed a machine learning algorithm to predict when a patient would suffer a heart attack, stroke, or death based on personal medical data
- Used python: pandas, sklearn, and pytorch libraries for reading, storing, and training the AI model.
- Worked with a stakeholder from Fivos named Doug Greene to ensure features and quality was met.

United States Candidate Voting system | University of South Alabama

Spring 2023

- Programmed in python to create a UI and read files or input valid candidates, used MongoDB to store the information into tables on a server.

Universal Screenshot Translator | Personal

Fall 2025

- Written in python that allows a user to snip sections of their screen to translate.
- Prototyped using GUI library tkinter and image recognition libraries such as easyOCR.
- Makes use of api calls from LLM model Gemini to translate converted text.

Warframe price prediction algorithm | Personal

Spring 2024

- Created a demo in google colab that would predict future prices of items in the video game Warframe.
- Data collected from scrubbing the warframe.market API and putting it into a CSV.
- Tested simulation returns an average around a 52% increase in starting "currency".
